Subject: Application for DevOps Engineer Position

Dear Hiring Manager,

I am writing to express my interest in the DevOps Engineer position in your organisation, as advertised. With 5+ years in DevOps and 7 years in backend development using Perl and Python - I bring a strong combination of infrastructure automation, AWS cloud expertise, and production support that aligns well with your needs.

In my most recent role at Quicken Software, I managed CI/CD pipelines using Jenkins and Docker, orchestrated containers with Kubernetes, and automated infrastructure with Terraform and Ansible. I have extensive experience in AWS, having worked with services such as EC2, VPC, ELB, ECS, and S3. At Nomis Solutions, I was recognized as the Top Performer in Q2 2024 for my contributions to Tableau automation and successfully optimized deployments, reducing release time by 50%.

What sets me apart is my ability to not only implement scalable DevOps solutions but also mentor junior team members and collaborate across agile teams to meet sprint goals. I am proficient in monitoring tools such as Datadog and Splunk, and I have hands-on experience handling production incidents, container-level troubleshooting, and ensuring high availability of services.

Currently based in Berlin on a Chancenkarte Visa (valid until November 2025), I am available for immediate employment. I am excited about the opportunity to bring my skills to an innovative team and contribute to your Company's ongoing success in delivering high-quality, reliable cloud infrastructure and deployment process.

Thank you for considering my application. I would welcome the opportunity to further discuss how I can add value to your team.

Sincerely,

Satya Karan
